

## 175. Combine Two Tables

Description Hints Submissions Discuss Solution

SQL Schema

Discuss (<https://discuss.leetcode.com/category/183>)

Pick One (/problems/random-one-question/)

Notes

Table: Person

```
+-----+-----+
| Column Name | Type |
+-----+-----+
| PersonId    | int  |
| FirstName   | varchar |
| LastName    | varchar |
+-----+-----+
```

PersonId is the primary key column for this table.

Table: Address

```
+-----+-----+
| Column Name | Type |
+-----+-----+
| AddressId   | int  |
| PersonId    | int  |
| City        | varchar |
| State       | varchar |
+-----+-----+
```

AddressId is the primary key column for this table.

Write a SQL query for a report that provides the following information for each person in the Person table, regardless if there is an address for each of those people:

FirstName, LastName, City, State
