Solution

📄 SQL Schema

💬 Discuss (<https://discuss.leetcode.com/category/184>)

🎲 Pick One (/problems/random-one-question/)

📝 Notes

Write a SQL query to get the second highest salary from the `Employee` table.

```
+-----+-----+
| Id | Salary |
+-----+-----+
| 1  | 100    |
| 2  | 200    |
| 3  | 300    |
+-----+-----+
```

For example, given the above `Employee` table, the query should return `200` as the second highest salary. If there is no second highest salary, then the query should return `null`.

```
+-----+-----+
| SecondHighestSalary |
+-----+-----+
| 200                  |
+-----+-----+
```

MySQL ▼

eclipse ▼

```
1 # Write your MySQL query statement below
2
3 SELECT ( SELECT max(Salary) from Employee
4         WHERE Salary <> (select max(Salary) from Employee)
5         )
6       SecondHighestSalary;
7
8 # SELECT (SELECT Salary FROM Employee GROUP BY Salary ORDER BY Salary DESC LIMIT 1,1) SecondHighestSalary;
```

☐ Custom Testcase ( [Contribute](#) ⓘ )
